

CS-2 Project Proposal

1. Project Title

The project of our project is the *LMNOP Book of Grades*

2. Problem Statement

One of a student's problems is that they forget to keep track of their scores from quizzes and exams.

3. Project Objectives

We plan to solve that by making a program that will help students record their scores, display them whenever, and compute them wherever

This is so that the student never loses track of their grades and can look back at them and compute them

4. Planned Features

We plan to add a menu so they can pick choices like:

- Add scores -> so they can add scores to assessments of subjects
- Display scores -> so they can see the scores of assessments
- Compute grade -> using the scores they added, the system can also compute their grades

5. Planned Inputs and Outputs

The user will input:

- Options -> to execute a certain command
- Score -> to add subject, name of activity, and score

Certain outputs include:

- Computed grade -> shows the grade based on the scores
- Display of all the scores

6. Logic Plan

START

DISPLAY "Welcome to LMNOP Book of Grades!"

DISPLAY "(1) Gradebook"

DISPLAY "(2) Results"

DISPLAY "(3) Exit"

INPUT choice

WHILE choice is not 3

IF choice = 1 THEN

INPUT subject

INPUT grade

INPUT meetings_per_quarter

COMPUTE final_grade

final_grade = (meetings_per_quarter - 1) × grade

```
    STORE subject and final_grade

    DISPLAY "Final Grade for ", subject, ": ", final_grade

ELSE IF choice = 2 THEN

    DISPLAY stored grades and results

ELSE
    DISPLAY "Invalid choice. Please try again."

END IF

DISPLAY "(1) Gradebook"
DISPLAY "(2) Results"
DISPLAY "(3) Exit"
INPUT choice

END WHILE

DISPLAY "Thank you for using LMNOP Book of Grades!"

END
```
